THE SECRET'S IN THE SCIENCE[®]

ORGANICALLY CHELATED TRACE ELEMENT, VITAMIN AND AMINO ACID DRENCH

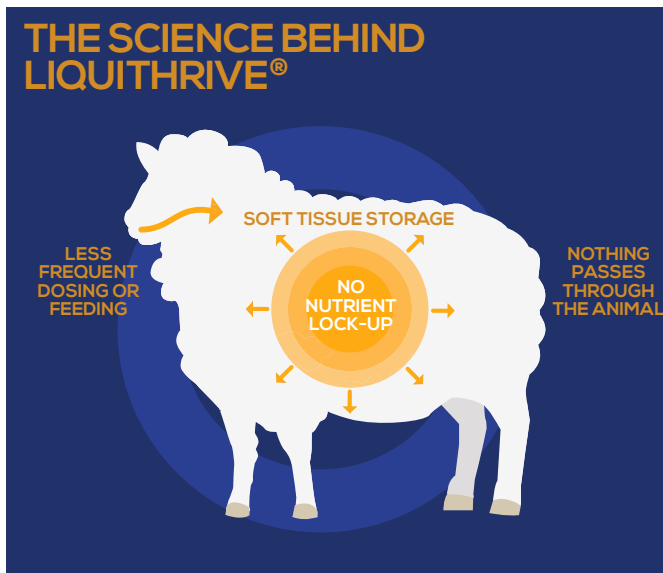

Liquithrive® Sheep is an organically chelated trace element, vitamin and amino acid supplement which is specifically designed for breeding sheep. It is designed to provide sheep with the resources necessary to maintain flock health, fertility and productivity.

Sheep are highly dependent on grass for their nutrient intake, but grass quality is reduced in the Autumn at a critical time when nutrient balance is key i.e. pre-tupping. Also, when administered pre-lambing, lamb vigour and survival rates can be improved.

Liquithrive® Sheep is formulated based on the clinically known needs of sheep with a high bioavailability of micro-nutrients to correct

nutritional imbalances. A high level of bioavailability means that trace elements and minerals are absorbed in the small intestine and stored in the soft tissue creating a reservoir of nutrients to be used when needed.

THE SCIENCE BEHIND LIQUITHRIVE®

Scottish Agricultural College (SAC), Stirling

An independent trial conducted by SAC assessed the impact of dosing Liquithrive® Sheep on a hill flock, with particular reference to fertility and lamb performance. Liquithrive® Sheep was used as a flushing supplement given to ewes four weeks before tupping. Results showed an improvement in conception with 80% of ewes in-lamb to first service.

KEY FINDINGS

- Barren ewes reduced by 20%
- Lamb numbers increase by 9%
- Lamb mortality reduced by 27%
- Lamb average weight increased by 0.91kg at weaning
- Tighter lambing period, peaking at 12 days compared to 15 days
